

Check Wish list System (Admin)

The wish list checking system (Admin) allows admins to check wish list entry from member users. System starts when user (admin) choose wish list module is dashboard. Then system connects with database and retrieve all wish list information. If it returns empty result, system output toast message saying 'No book in wish list'. However if there are books in wish list table in database, system displays all books in wish list. Flow of the check wish list system ends.
