

Student Delete System Flowchart Diagram

Student Delete System first starts when logged in Admin user start student management module. First information of all student is loaded. Then user are allowed to provide input to filter required student from all students. If user provide blank student ID, all students are loaded. If user provide student ID, filtered students are displayed. Then user choose student to be deleted. Next flow of the system asks user for the confirmation to delete the student. If user selects yes, student gets deleted and system flow completes, while if user selects no, system returns to state where all students information are loaded.
